

SB4101 User Guide

Regulatory Information

Federal Communications Commission Radio and Television Interface Statement for a Class 'B' Device.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in the residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If the equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Increase the separation between the equipment and the affected receiver
- Connect the equipment on a circuit different from the one the receiver is on

You may find the following booklet, prepared by the Federal Communications Commission, helpful:

How to Identify and Resolve Radio-TV Interference Problems Stock No. 004-000-0342-4, U.S. Government Printing Office Washington, DC 20402

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This product was FCC compliant under test conditions that included the use of the supplied cable between system components. To be in compliance with FCC regulation, the user must use this cable and install it properly.

Different types of cord sets may be used for connections to the main supply circuit. Use only a main line cord that complies with all

applicable product safety requirements of the country of use.

Declaration of Conformity

According to 47CFR, Parts 2 and 15 for Class B Personal Computers and Peripherals; and/or CPU Boards and Power Supplies used with Class B Personal Computers, Motorola BCS, 6450 Sequence Drive, San Diego, CA 92121, 1-800-225-9446, declares under sole responsibility that the product identifies with 47CFR Part 2 and 15 of the FCC Rules as a Class B digital device.

Each product marketed is identical to the representative unit tested and found to be compliant with the standards. Records maintained continue to reflect the equipment being produced can be expected to be within the variation accepted, due to quantity production and testing on a statistical basis as required by 47CFR 2.909. Operation is subject to the following condition: This device must accept any interference received, including interference that may cause undesired operation. The above named party is responsible for ensuring that the equipment complies with the standards of 47CFR, Paragraph 15.101 to 15.109.

Canadian Compliance

This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations. Cet appareil numérique de la classe B respects toutes les exigences du Règlement sur le matériel brouilleur du Canada.

Warning

TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

Caution

TO PREVENT ELECTRICAL SHOCK, DO NOT USE THIS PLUG WITH AN EXTENSION CORD, RECEPTACLE, OR OTHER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.

THESE SERVICING INSTRUCTIONS ARE FOR USE BY QUALIFIED PERSONNEL ONLY. TO REDUCE THE

RISK OF ELECTRICAL SHOCK, DO NOT PERFORM ANY SERVICING OTHER THAN THAT CONTAINED IN THE INSTALLATION AND TROUBLESHOOTING INSTRUCTIONS UNLESS YOU ARE QUALIFIED TO DO SO. REFER ALL SERVICING TO QUALIFIED SERVICE PERSONNEL.

Repairs

If repair is necessary, return the Product (including all Software, components, documentation, and other contents of this Product package) together with proof of purchase to the place of purchase.

Easier!*

Always on, always connected

Faster!**

Up to 100 times faster than a phone modem

Better!***

A great choice for Internet access

Just open your browser and surf!

Congratulations, you have a new state-of-the-art SB4101 cable modem! This high-speed, upgradeable modem enables you to connect your home or business computer to a DOCSIS-compliant data network. The SB4101 transmits and receives data at much higher speeds than traditional telephone or ISDN modems.

It provides high-speed access to the Internet and other online services.

A new Universal Serial Bus (USB) port is available for a single-user direct connection to USB-equipped computers. The standard Ethernet connection provides network service to single or multiple users.

Unlike a telephone modem, the SB4101 is always online. Just open your browser and surf.

^{*} Unlike analog phone modems and ISDN, you're always on, always connected.

^{**} Actual speed will vary. Many network and other factors affect download speeds.

^{***} SURFboard is made by the company with over 50 years of cable TV expertise.

Troubleshooting

Legal

Before You Begin

Before you begin the installation, check that you have:

Power cord

10/100Base-T shielded Ethernet cable

USB cable

SB4101 User Guide CD-ROM

One 10/100Base-T shielded Ethernet cable

Required for connecting to the Ethernet port.

One USB cable

Required for connecting to the USB port.

SB4101 User Guide CD-ROM

Contains the User Guide and USB drivers necessary

for connecting to USB port.

You need to purchase a 75-ohm coaxial cable with F-type connectors for connecting your SB4101 to the nearest cable outlet. If you have a TV attached to the cable outlet, you may need a 5-900 MHz splitter to use both the TV and the SB4101. Both the coaxial cable and the RF splitter are readily available at consumer electronic stores.

Before You Begin

Installation

Configuration

Troubleshooting

Legal

You must call your service provider to activate your service. You need to provide the media access control (MAC) address. This address is found on the SB4101 bar code label marked HFC MAC ID on the rear panel. The address format is 00:20:40:xx:xx:xx or 00:04:db:xx:xx:xx.

Precautions

- Postpone SB4101 installation until there is no risk of thunderstorm or lightning activity in the area. Avoid damaging the SB4101 with static by touching the coaxial cable connector when it is attached to the earth grounded coaxial cable TV wall outlet. Always first touch the coaxial cable connector on the SB4101 when you are disconnecting or re-connecting your USB or Ethernet cable from the SB4101 or your PC.
- Do not block the ventilation holes on the sides of the cable modem to prevent overheating the SB4101.
- Do not open the SB4101 cable modem. Refer all service to your local service provider.
- Wipe the modem with a clean, dry cloth. Never use cleaning fluid or similar chemicals. Do not spray cleaners directly on the unit or use forced air to remove dust.

System Requirements Summary

- Service Provider
- Computer
- HTML Browser
- Ethernet card or SB4101 CD-ROM containing the USB software

System Requirements

You need the following to use the SB4101 with your computer system:

Service Provider

You must sign up with a data service provider for access to the Internet and other online services. You should ask your data service provider the following questions:

- Do you have any special system requirements?
- When can I begin to use my cable modem?
- Are there any files I need to download once I'm connected?
- Do I need a user name or password to access the Internet or use Email?

Computer

Your computer must be equipped with a USB or Ethernet port and Transmission Control Protocol/Internet Protocol (TCP/IP) to access the SB4101. The SB4101 is compatible with Microsoft®, Macintosh® and UNIX® operating systems. Computers using Windows® 95, UNIX, or Macintosh systems must use the Ethernet connection.

Before You Begin

Installation

Configuration

Troubleshooting

Legal

The Ethernet card must be installed before the SB4101. If it isn't, follow the installation instructions that came with your Ethernet card.

System Requirements

HTML Browser

Any standard HTML (web) browser works with the SB4101.

Ethernet Card or SB4101 CD-ROM Containing the USB Software

Any standard 10/100Base-T Ethernet card operates with the SB4101. This is not needed if connecting to the USB port. The Ethernet card must be installed before the SB4101. If it is not, follow the installation instructions included with your Ethernet card.

The USB connection is supported by Windows 98, Windows 2000, and Windows Me and requires special software to operate. The USB driver software files are on the CD-ROM supplied with your SB4101.

The USB drivers can be upgraded from the Internet. Check our website for information, http://www.motorola.com/broadband.

Your computer must be configured for TCP/IP and have an IP address for the SB4101 to operate. Your service provider furnishes the IP address.

Before You Begin

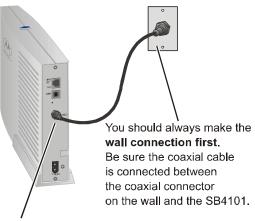

Installation

Configuration

Troubleshooting

Legal

Avoid damaging the SB4101 or your PC with static electricity.

To release any static charges, touch the coaxial cable connector on the modem before connecting or disconnecting the USB or Ethernet cables

Installation

Installation and Configuration Tasks

- Install cables
- Set up USB in Windows if you are using a USB port on your PC
- Configure TCP/IP
- Verify IP address

There are two sections for USB installation:

- Windows 98
- Windows 2000 and Windows Me

To Ethernet

or USB

To cable outlet

→ Cabling and Startup for a Single User

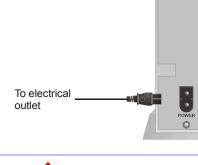

You must allow 5 to 30 minutes to power up the first time because the SB4101 must find and lock on the appropriate channels for communications.

- 1 Be sure that your computer is on and the SB4101 is unplugged.
- Connect the coaxial TV cable to the cable outlet or splitter and the other end to the SB4101 connector marked CABLE. Hand-tighten the connectors to avoid damaging them. You may need a 5-900 MHz splitter and an additional 75-ohm coaxial cable if you have a TV connected to the cable outlet.
- 3 Insert the SB4101 CD-ROM into your CD-ROM drive.
- 4 Plug the power cord into the SB4101 connector marked POWER and the other end to the electrical outlet.

Caution

Do not connect both Ethernet and USB cables to the same computer.

To turn on your SB4101, simply plug it in. It is not necessary to unplug it when not in use.

Cabling and Startup for a Single User

- 5 Check that the lights on the front of the SB4101 cycle through the following sequence:
 - Power flashes during a self-test. When the self-test is successfully complete, the light is solid green.
 - Receive flashes while the SB4101 scans for the receive channel. When the receive channel is locked, the light is solid green.
 - Send flashes while the SB4101 scans for the send channel. When the send channel is locked, the light is solid green.
 - Online flashes while the SB4101 is obtaining configuration information. When the configuration information is obtained, the light is solid green.

Cabling and Startup for a Single User

6 Connect your computer to the SB4101 using one of the following methods:

USB

Connect the USB cable to the SB4101 port marked USB and the other end to the USB port on the back of your computer.

For Windows 98 USB users, go to the next page.

For Windows 2000 and Windows Me USB users, go to page 18.

Ethernet

Connect the 10/100Base-T shielded Ethernet cable to the SB4101 Ethernet connector and the other end to the Ethernet jack on the back of your computer. For an Ethernet connection, skip over the USB instructions and go to "Configuring for TCP/IP" on page 23.

During normal operation, the Power, Receive, Send, and Online lights are on and the Activity light flashes when transferring data between the SB4101 and your computer.

Verifying Your IP Address in Windows 2000

Improper connections between your PC and the SB4101 and cable network problems are indicated when you receive an Autoconfiguration IP Address. An example is displayed on the upper left of this page. Check your cabling and whether you can see your regular cable-TV channels on your television.

After verifying your cable connections and proper operation of the cable-TV system by looking at the channels on your TV, you can attempt to renew your IP address.

To renew your IP address:

- 1 Type ipconfig /renew and then press ENTER. If a valid IP address is displayed, then Internet access should be available.
- **2** Type **exit** and then press **ENTER** to return to Windows.

If after performing this procedure your computer does not access the Internet, call your service provider. They will assist in your configuration.

Possible Solutions

- Check the coaxial cable at the modem and wall outlet and hand-tighten if necessary.
- Check the IP address (follow the steps in Verifying Your IP Address on page 30); call your service provider if you need an IP address.
- Check that the USB or Ethernet cable is attached at the modem and your computer.
- Press the Standby button to reconnect Internet service.
- Check that Acrobat Reader 4.0 is installed and selected.
- Remove the USB driver using the instructions for a Windows 98 or Windows 2000/Windows Me computer that appear on the following pages.

Removing the SB4101 Device Listing from Windows 98

- On your Windows Desktop, right click the **Network Neighborhood** icon and select **Properties**. The Network window is displayed.
- 2 Highlight the text that reads "Motorola SurfBoard USB Cable Modem SB4101," as illustrated in the lower window.

This procedure does not remove the USB driver from your system, it only removes the device listing from your system.

The SB4101 uses the same driver as the SB4100.

Removing the USB Driver from Windows 98

You now need to start Windows Explorer. Start Explorer by clicking **Start** and then selecting **Run**. In the Run window, type **explorer** and then click **OK**. The Exploring window is displayed as shown on the left.

- Be sure that the USB cable has been removed from your PC or SB4101 cable modem.
- Select your CD-ROM drive. Run the Remove utility from the Motorola SB4101 CD-ROM by double clicking the Remove icon.

Removing the USB Driver from Windows 98

The SB4101 USB Driver Removal windows are displayed on this page.

- 3 Click Remove Driver.
- 4 The removal of the SB4101 USB is now complete.
 - You may get various messages in this step, depending on the previous installation. The status messages you receive are informational only.
- 5 After you have removed the USB device, repeat the Windows 98 USB Installation procedure to reinstall the SB4101 with a USB device.
 - If you have problems, please call us toll-free 1-877-466-8646.

► Removing the SB4101 Device Listing from Windows 2000 and Windows Me

- 1 From your Windows 2000 or Windows Me desktop, click Start.
- 2 Click Settings.
- 3 Click the Control Panel icon and the window on the left is displayed.
- 4 Double-click the **Add/Remove Hardware** icon. This action starts the Add/Remove Hardware Wizard as illustrated in the upper window on the next page.

This procedure does not remove the USB driver from your system, it only removes the device listing from your system.

Removing the USB Driver from Windows 2000 and Windows Me

- 6 The window on the left is displayed. Be sure that the USB Cable Modem is disconnected. Click Remove Driver.
 - Depending upon how the device was removed early on in the process, all of the files may not be shown as Successfully Removed and some of the files may be displayed as Not Found. If a file displays a status of Not Found, Windows 2000 or Windows Me removed the file during the Add/Remove Hardware Wizard portion of this de-installation procedure.
- Once you have removed the USB device, repeat the Windows 2000 USB Installation procedure to reinstall the SB4101 with a USB device.

Introduction	Before You Begin	Installation	Configuration	Troubleshooting	Legal	
Glossary						
Coaxial cable (coax)		A type of wire that consists of a center wire surrounded by insulation and then a grounded shield of braided wire. The shield minimizes electrical and radio frequency interference. The coaxial cable is the primary type of cabling used by the cable television industry and is also widely used for computer networks.				
DOCSIS		The Data-Over-Cable Service Interface Specifications defines interface standards for cable modems and supporting equipment.				
Expansion slot		An opening in a computer where a circuit board can be inserted to add new capabilities to the computer. Expansion slots for PCs come in half- and full-size. Half-size slots are also called 8-bit slots, and full-size slots are called 16-bit slots. PCI expansions slots are always full-size and connect directly to the PCI bus.				
F-type connector		A connector used in the cable television industry that connects coaxial cable to equipment.				
IP address		An identifier for a computer or device on a TCP/IP network. Networks using the TCP/IP protocol route messages based on the IP address of the destination.				
MAC address		Media Access Control address. A hardware address that uniquely identifies each node of a network. The MAC address is used to forward information through a network to its final destination.				

Introduction	Before You Begin	Installation	Configuration	Troubleshooting	Legal	
Glossary						
MHz		Mega Hertz. A measure of radio frequency - millions of cycles per second. One MHz represents one million cycles per second.				
PCI		Peripheral Component Interconnect. Most PCs today include a PCI bus in addition to a more general ISA expansion bus.				
Splitter		A splitter is a device that divides the signal power from an input cable equally between two or more signals, each carrying a selected frequency range.				
TCP/IP		Transmission Control Protocol/Internet Protocol. A set of protocols that provides the standards and rules for controlling and managing communications between networks.				
VGA		Video Graphics Array. A graphics display system for PCs. All PCs made today support VGA, and possibly some other more advanced standard.

FAQs

Got a question? We've put together a list of questions customers frequently ask.

- What is high-speed cable Internet access?
- Cable Internet access uses cable television wires instead of telephone lines to tap into the information on the Internet. It's extremely fast and affordable, and it doesn't tie up phone lines for incoming or outgoing calls and faxes.
- How fast are cable modems?
- Cable modems offer Internet access at speeds up to 50 times faster* than a traditional phone modem. A cable modem user can experience speeds of over 1,000 Kbps. Due to network conditions, such as traffic and the speed of the site you're visiting, actual download rates may vary.
- Can I still watch cable TV while I'm using my cable modem?
- Yes, cable television lines are capable of handling the cable TV signal as well as sending and receiving information on the Internet at the same time.

^{*} Actual speed will vary. Many network and other factors affect download speeds.

Introduction **Before You Begin** Installation Configuration **Troubleshooting** Legal

FAQs

- What is DOCSIS?
- DOCSIS is the industry standard for cable Internet access. This standard is intended to ensure that all DOCSIS cable modems interface with all DOCSIS-compliant cable systems. Motorola's SB4101 cable modem is DOCSIS compliant.
- If I have a cable modem, can I still use my old 28.8 Kbps or 56 Kbps modem?
- Sure! Although once you've experienced the speed of cable Internet access, you'll never again want to wait for traditional dial up services.
- I have more than one computer. Do I need more than one computer modem?
- No, not if your computers are connected via a network. The SB4101 is capable of supporting current Internet Connection Sharing technologies. Internet Connection Sharing software enables the user to connect more PCs to the Internet by using the PC containing the SB4101 as a gateway.
- Do I need to change my Internet Service Provider (ISP)?
- Currently most Internet Service Providers are not set up to handle cable Internet access. Check with your local cable company for your specific information.

Introduction **Before You Begin** Installation Configuration **Troubleshooting** Legal

FAQs

- Do I need to subscribe to cable TV to get cable Internet access?
- No, but you will need to subscribe to cable Internet service. Some systems require that you subscribe to basic service before you can get Internet access and/or offer a discount when you use your own cable modem. Check with your local cable company for specific information.
- What does the SB4101 limited warranty cover?
- The standard coverage for an SB4101 is a 2-year limited warranty.
- What type of technical support is available?
- For guestions about your Internet service or connection, call your cable service provider. If you have problems with your Motorola broadband products, you can call us toll-free at 1-877-466-8646 (USA only).
- What do I do if my modem stops working?
- Refer to the Troubleshooting section of this User Guide. It has quick tips for diagnosing problems, as well as simple solutions. If you continue to have problems, call your cable service provider. You can call us toll-free at 1-877-466-8646 (USA only).

Software License

The Software includes associated media, any printed materials, and any "on-line" or electronic documentation. Software provided by third parties may be subject to separate end-user license agreements from the manufacturers of such Software.

The Software is never sold. Motorola licenses the Software to the original customer and to any subsequent licensee for personal use only on the terms of this License. Motorola and its 3rd party licensors retain the ownership of the Software.

You may:

USE the Software only in connection with the operation of the Cable Modem.

TRANSFER the Software (including all component parts and printed materials) permanently to another person, but only if the person agrees to accept all of the terms of this License. If you transfer the Software, you must at the same time transfer the Cable Modem and all copies of the Software (if applicable) to the same person or destroy any copies not transferred.

TERMINATE this License by destroying the original and all copies of the Software (if applicable) in whatever form.
